Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al. (US Patent 5,682,927) in view of Ericsson (US Patent 3,125,326) and further in view of Kaminski et al. (US Patent 6,654,894). Takahashi et al. discloses a motor-driven reinforcing bar binder comprising a binding wire feeding mechanism (6) that feeds a binding wire so as to be wound around a reinforcing bar and a binding wire twisting mechanism (11) that grasps and twists the binding line wound around the reinforcing bar so as to bind the reinforcing bar. Ericsson discloses a cooling fan (30) device provided within a housing. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have a cooling fan in Takahashi et al.'s binding device in order to cool the motor during operation, Column 2, lines 55-56.

Kaminski et al. discloses a fan driving control unit (310) that on-off controls the cooling fan device (100) wherein the fan driving control unit drives the cooling fan device based on temperature, Column 2, lines 55+ - Column 3, lines 1-6; Column 4, lines 1+. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide temperature based fan driving control in order to save energy, lower manufacturing costs, and allow optimal thermal performance, Column 3, lines 7-38.

Allowable Subject Matter

2. Claims 2, 3, and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 6-11 are allowed.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and further show the state of the art: US PGPUB 2004/0206251.

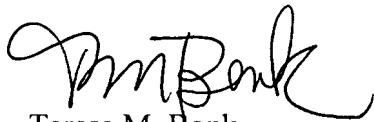

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa M. Bonk whose telephone number is (571) 272-1901.
